

WHAT TO EXPECT AT YOUR FIRST APPOINTMENT

At your initial consultation, our physicians will review your symptoms and medical history and perform a physical examination. They will then review the risks and benefits of the procedure and answer any questions you may have.

An MRI is the best test for assessing the size, number and location of your fibroids, which helps determine whether or not you would be a good candidate for UFE. If you have had an MRI done recently, we recommend you bring the CD/images with you for our physicians to review at the time of your appointment.

UTERINE FIBROID EMBOLIZATION

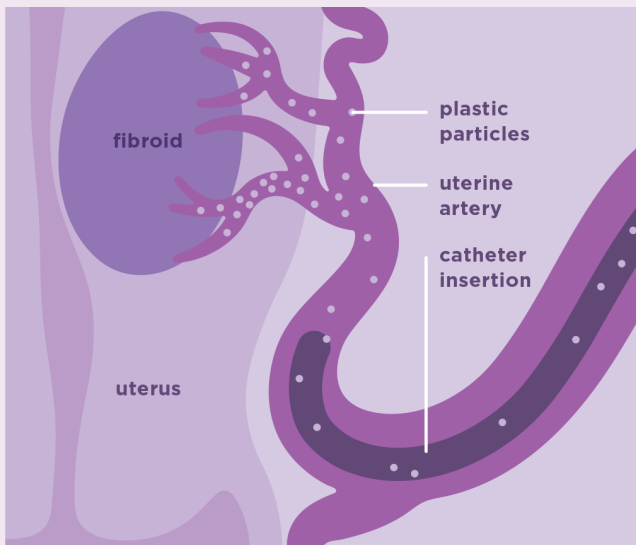

NON-SURGICAL TREATMENT FOR UTERINE FIBROIDS

WHAT IS UTERINE FIBROID EMBOLIZATION?

Uterine Fibroid Embolization (UFE) is a minimally-invasive outpatient procedure that shrinks fibroids and eliminates their symptoms. UFE is performed by interventional radiologists who use x-ray guidance to deliver small particles into the blood vessels feeding the fibroids. The particles are injected through a catheter (a thin flexible tube) which is placed through a small incision in the groin. The particles block blood flow to the fibroids, allowing them to shrink and your symptoms to be improved.

BENEFITS OF UFE

- Decreases symptoms
- All fibroids are treated
- You maintain your uterus
- Back to work in 1 week
- Covered by Insurance
- FDA Approved

WHAT OUR PATIENTS ARE SAYING

It's been three weeks post, and I feel great. I not only feel like my stomach is going down, but I have more energy. I feel like a new me.

GEORGETTE T.

I've experienced tremendous relief from block blood flow to the fibroids, allowing symptoms. I recommend this UFE to anyone with such needs to overcome fibroids.

AMAMA U.

I had very heavy cycles and it was very difficult for me to work or do anything. Hysterectomy wasn't an option for me. Then I found Dr. Doe and learned about Uterine Fibroid Embolization. Dr. Doe saved my life. I would recommend him to anyone.

ALADRIANE H.

This has been one of the best choices I have made by deciding to get UFE Done. I just wish I would have gotten it done years sooner.

N.C.

I almost want to call Dr. Doe's office every month, every time I have my cycle because it is so much better.

DR. SUHYUN AN

DR. ANDREW DOE, M.D.

Dr. Andrew Doe, M.D. is a board-certified, fellowship-trained interventional radiologist who received his education and training in New York at Upstate Medical University and Albany Medical Center.

Dr. Doe moved to Houston to launch Alate Health, an innovative outpatient interventional radiology center where his patients receive the most cutting edge treatments in a comfortable outpatient setting. In 2013, Dr. Doe became the first doctor in Houston to perform uterine fibroid embolization safely in the outpatient setting. Having treated thousands of patients, he is a leading provider of UFE in Houston and the surrounding areas.

When Dr. Doe isn't working, he enjoys spending time with his wife and daughters and practicing Brazilian jiu-jitsu.
